Vak: Neural Networks & Deep Learning — credits: 5

Vakcode	SEVM26NNDL
Naam	Neural Networks & Deep Learning
Studiejaar	2026-2027
ECTS credits	5
Taal	Engels
Coördinator	S.S. Ahmed
Werkvormen	Hoorcollege Projectonderwijs
Toetsen	Neural Networks & Deep Learning - Opdracht

Leeruitkomsten

At the end of this module the student:

- utilizes the fundamental principles of neural networks and deep learning, including architectural components, training procedures, and objective functions to implement, train, and evaluate neural network models using a modern deep learning framework such as PyTorch.
- designs and justifies neural network architectures appropriate to a given problem, considering data characteristics and task requirements.
- assesses and improves model performance using appropriate evaluation metrics, hyperparameter tuning, and systematic troubleshooting.
- applies deep learning techniques to different data modalities, such as structured, image-based, or sequential data, using architectures such as convolutional or recurrent networks.
- designs and executes an end-to-end deep learning project, including data preparation, model development, validation, and communication of results, for tasks such as classification, prediction, or anomaly detection.

Inhoud

The module covers the following topics:
neural network fundamentals, deep learning workflows & implementation, model architectures (e.g. feedforward, convolutional, recurrent), training and optimization strategies, hyperparameter tuning, evaluation metrics and performance analysis, feature and representation learning, and project-based application to tasks such as classification, prediction, or anomaly detection.
