

Course: Afstudeeropdracht

credits: 30

Course code	CMVB24AFS
Name	Afstudeeropdracht
Study year	2026-2027
ECTS credits	30
Language	Dutch, with parts in English
Coordinator	P.A. Zwart

Modes of delivery	Graduation project
Assessments	Graduation Project - Other assessment

Learning outcomes

- A) You can identify and understand the context of the problem, user's desire, client's objective, stakeholders' interests, and technology's capabilities.
- B) You come up with ideas and develop concepts for (interactive) products, services, and experiences. This involves finding new ways to meet user requirements, client objectives and other interests.
- C) You are able to shape concepts and make them concrete in prototypes. You can fit your design into applicable standards and the company's product portfolio.
- D) You are able to repeatedly test results arising during different stages of the design process for their value and importance for the user/client's requirements.
- E) You are a confident designer who can switch smoothly in the design process, who conducts thorough research and uses the outcomes to improve design.
- F) You are enterprising and organisationally sensitive. You see opportunities and realise them. You organise yourself and others and include everyone in the innovation process.
- G) You involve others from the team, users and other stakeholders in the design. Also from other disciplines. You understand relationships and make sure everyone feels comfortable in the process.
- H) You work from a personal commitment to society and from a drive to improve it. You know where you stand and how you can develop.

Content

Content

During graduation you show that you have mastered all the competencies of CMD at the final level. That is why you go through the design cycle as usual and you iterate from a problem (or opportunity or issue) up to and including an evaluated prototype. You prepare a graduation portfolio that consists of various components such as a prototype, a design process report, the evidence from the various phases of the design cycle and a reflection report (for a complete overview of the portfolio components, see the graduation manual).

You can only start your graduation with a graduation assignment approved by the graduation coordinator. You will be coached in the search for that assignment and the preparation of the application form. This takes place during the Introduction Week Year 4 (start of the first semester), the Graduation Bootcamp (during period 1) and the Kick Start Graduation (first week of the graduation semester).

During the Kick Start Graduation you make a roadmap with a time planning. You will also formulate some learning goals.

During your graduation, you will be supervised by your graduation supervisor and receive structured feedback based on agreements. The graduation supervisor will be assigned to you by the graduation coordinator.

Assignment

You will design and develop an interactive media experience, documenting your design process in a portfolio. This will demonstrate that you have mastered the final competencies of CMD. You will find the assignment yourself in the professional field, taking into account the criteria set out in the graduation manual.

You choose the logical starting point in the design cycle: do you start with a problem, an existing product or prototype, or do you start with an initial prototype and iterate further? During the final interview (exam), you demonstrate your final design and process using the portfolio and prototype.

Included in programme(s)

Communication & Multimedia Design

School(s)

Arts, Design & Built Environment
