

Course: Physiotherapeutic Care 3: Anatomy & Skills

credits: 5

Course code	PIVP25PC3AS	Modes of delivery	Individual supervision
Name	Physiotherapeutic Care 3: Anatomy & Skills		Practical / Training
Study year	2026-2027		Self-study
ECTS credits	5	Assessments	Anatomy 3 (Living) - Skills test
Language	English		Assessment and treatment 3 - Assignment
Coordinator	A.J. Beetsma		

Learning outcomes

Learning Outcomes

The student is able to independently carry out a physiotherapeutic consultation in the context of DAP screening with a fellow student within an educational setting. Professional role: HCP,COM,RP-1

The student is able, based on described case studies, to independently perform a physiotherapeutic partial examination and partial treatment for a client with a single musculoskeletal problem. Professional role: HCP,HP,COM,RP-1

The student is able, within the context of indicated and/or care-related prevention, to provide education to clients and their relatives and/or other involved parties in language that is understandable to them and in line with the rules of professional communication. Professional role: HP,COM,RP-1

The student is able, within the context of indicated and/or care-related prevention, to verbally inform clients and their relatives and/or other involved parties about health-promoting behaviour and the clients' own responsibility in this, using language that is understandable to them and in line with the rules of professional communication. Professional role: HP,COM,RP-1

The student masters the basic principles of the knowledge (the Body of Knowledge, Skills and Attitudes) required to develop an examination and treatment plan in the context of indicated prevention for an emerging physical health problem (mainly factual knowledge, understanding, and reproduction). Professional role: HCP,HP-1

The student expresses their own cultural identity within the educational setting and uses this in interactions with people from another culture. Professional role: RP,COM-1

Content

PT-care 3 consists of 2 courses of 5 EC that are interwoven with each other. Course 1: MSC lower extremity & lumbar spine and course 2: anatomy and skills.

This course concerns anatomy and skills and covers the more practical part of PT-care 3.

In daily practice of physiotherapy, musculoskeletal conditions of the lower extremity and lumbar spine are common. Think of complaints related to artrosis deformans of the hip and / or knee or traumatic ankle or knee injuries. Back problems are common in certain (work-related) situations. During this course the student must be able to demonstrate sufficient medical, behavioral and physiotherapeutic knowledge and skills to assess and treat patients with musculoskeletal conditions of the lower extremity and lumbar spine. Assessment and treatment skills will be assessed formative during the course.

Living Anatomy is a course designed for practice. It comprises identifying, localising, palpating and drawing bony structures, as well as origin and attachment of muscles, muscle bellies, ligaments and tendons of the spinal column and the lower extremity. In this course we will discuss and test the basic anatomic knowledge and skills that we use as physiotherapists. For each student, the Anatomy classes are offered for at least one period in the international classroom where students from the regular and 3-year programme have classes together with international students. This course delves deeper into the materials of Anatomy 1 (Living) and expands on Anatomy 2 and will be completed practical exam.

Included in programme(s)

International Physiotherapy

School(s)

Health, Care & Vitality
