

Vak: Object Oriented Programming

credits: 2

Vakcode	ELVH17AOOP
Naam	Object Oriented Programming
Studiejaar	2021-2022
ECTS credits	2
Taal	Engels
Coördinator	M.S.R. van Noordennen

Werkvormen	Hoorcollege Opdracht Practicum / Training
Toetsen	Object Oriented Programming - Opdracht

Leeruitkomsten

The student:

- creates (dynamic) data structures such as:
 - enumerations
 - records
 - dynamic arrays.
- creates an object oriented program that carries out a given task by:
 - using basic object oriented programming skills
 - using the principles of information hiding and encapsulation (classes/objects/public vs private)
 - using the inheritance mechanisms.
- creates a structured program by:
 - using standard libraries.
- creates a structured program which is:
 - user friendly
 - scalable
 - maintainable
- creates a robust programs by implementing techniques such as:
 - test programs
 - exception handling
 - debugging.

Inhoud

This module is centered around object oriented programming. Next to the specific programming skills and practices around structured programming, you will learn about how to write a program that is robust and modular. You will also learn how to deal with large (dynamic) amounts of data.

The object oriented programming skills covered in the learning outcomes are however applicable to other programming languages.
